Mr. Frank C. Carlucci  
Deputy Director  
Central Intelligence Agency  
Washington, D.C. 20505

Dear Mr. Carlucci;

Concerning your recently published remarks in the N.Y. Times, I would like to make a suggestion about secrecy leaks in the CIA.

For 5 years I have been given the run around by certain influential government officials in my effort to gain information about illicit behavior control experimentation by the intelligence community in which I am a participant against my will.

Before stricter secrecy laws are enacted may I suggest that the intelligence community should continue setting its house in order?

For your information, I have for 6 years been an unwitting participant in behavior control experimentation in the Albany-Schenectady area of New York involving communication systems and high powered technology. The following list of effects upon me personally characterizes the work:

- 1) The manifestations occur chiefly in my home and car, and in my parents home in Cambridge, Maryland, although many of the effects occur anywhere. Some effects are briefly cut off or lessened when I travel - up and down valleys, on circular roads, under bridges. Some of the effects can be neutralized by metal screening, by noise, by wool coverings, by various parts of my body. I can greatly cut down the effects by turning off the electric power in my house.
- 2) My emotions can be blocked off or restored, one by one.
- 3) My breathing can be greatly altered.
- 4) All my muscles can be relaxed or stimulated, separately.
- 5) On certain settings, my sensations can pick out power sources, nearby electric lines, as a bodily sensation at a short distance.
- 6\* Various aspects of my thoughts can be blocked out or restored in an ever increasingly sophisticated manner.
- 7) Mental images which I could never perceive before can be shown me mentally or taken away.
- 8) My eyeballs can be greatly manipulated. This is frequently related to my thought patterns.

- 9) My hearing can be exaggerated.
  - 10) I never get enough sleep. I can be kept awake indefinitely, once for 6 days. Most of the experimentation is conducted at night, although daytime exploration was very heavy in 1974-75.
  - 11) You can see from the above list that I can be turned into a social misfit at any time.
- This is not a complete list of the effects by any means.

Further, for your information, I was born in Clarksburg, W. V., in 1936. I graduated from Wellesley College in 1958. I am married with 3 children. I am active in the League of Women Voters, currently chairing a study committee in our locality, enjoy tennis and bridge with my friends. My husband, through no fault of his own, has been unable to help me.

If you are truly interested in safeguarding the legitimate secrets of the intelligence community, would you please assign someone to investigate the handling of this advanced behavior control research, so that the agony endured by certain human subjects can be ended?

Only when such illegal and grossly unethical activities by the intelligence community have ended, should tighter secrecy rules be enacted. Your secrecy endeavors seem to be working entirely too well in this instance.

Until I receive the active assistance of someone high enough in the intelligence community to believe my allegations and investigate the matter, my family and I remain engulfed in a living hell.

If you are unable to act on this matter, will you please see that this information is received by someone in a position to act upon it.

I would appreciate a reply at your earliest convenience.

Yours truly,

*Anne K. Magnuson*
